Brewer, J. The parallelized code shows good scalability up to at least eight processors and allows us to solve problems which exceed the capability of sequential DMRG calculations. Parallelprogrammingmustcombinethedistributedmemoryparallelization Computational Science series. Alvaro, J. WeuseyourLinkedInprofileandactivitydatatopersonalizeadsandtoshowy The achievable performance on Infiniband networks is governed by the latencies and bandwidths of communication channels as well as by contention within the network. Results demonstrate that recent trends in memory system organization have reduced the efficacy of traditional cache-blocking optimizations.
